

The proposed plan, Alternative A, would leave 9270 of the 10 mile stretch of the Willamette topic.

I feel that this plan endangers fish and wildlife, workers and those consuming fish from the river.

Contaminants should be removed from the river, not stored in or near the river, as this poses future danger to those living nearby.

Costs should be met by the polluters, not by local taxpayers.

Controls must be set in place to prevent future contamination.
